Data set Contents

The data set consists of:

- a tabular file saved in .por format
"CatchEyou_WP7_surveypilot_dataset_Estonia.por"
- a README file
"README_CatchEyou_WP7_surveypilot_Estonia.pdf"

Guide to the consultation of the dataset

Abstract

The data set was generated within the research project Constructing AcTive CitizensHip with European Youth: Policies, Practices, Challenges and Solutions (CATCH-EyoU) funded by European Union, Horizon 2020 Programme - Grant Agreement No 649538. The data set is a truncated version of the adolescents' and young adults' survey that was carried out in Estonia from May to June 2016. It merges results of two polls (16-18 and 20-26 year olds). Sample size is 109 respondents. 46 of them filled adolescents' questionnaire and 63 young adults' questionnaire.

CATCH-EyoU: Processes in Youth's Construction of Active EU Citizenship: pilot Questionnaires: Estonia

README file

Respondents were approached in Southern Estonia, mostly from Estonian secondary schools and from University of Tartu. 76% of participants were females and 24% men. The mean age of adolescents was 16,8 years (SD = 0,67; range 16-18) and the mean age of young adults was 22,1 years (SD = 2,37; range 19-29).

Respondents were contacted at schools and in university classes and the objectives of study were presented to them. Those who agreed to participate in the study recorded their E-mails. All participants filled out an online questionnaire.

Survey was conducted by University of Tartu (UT) within the WP7 research activity which aims at testing processes influencing societal and political engagement of young people.

Keywords: youth, European citizenship, surveys, identity, civic and political participation.

Content of the file:

file **CatchEyou_WP7_survey_dataset_Estonia.por** contains 330 variables and 1087 cases.

File specifics

The dataset is accessible using different statistical packages / data analysis software, whether proprietary (such as "SAS", "SPSS", "Stata", "Excel", etc...) or open source (such as "R").

Notes

All variables from the active dataset are written to the portable file, with variable names, variable and value labels, missing-value flags, and print and write formats.
