

Datadoi Zoom & Contrast

User Guide: Edge, Firefox and Chrome

A free browser extension for enlarging pages and using high-contrast mode in the Datadoi research data repository.

1. Where does the extension work?

The extension works at <https://datadoi.ee/> and usually displays a floating toolbar in the bottom-right corner of Datadoi Dataverse pages. The toolbar may not appear on some standalone information or document pages. The extension does not work on other websites.

2. Installation and first use

1. Open the Datadoi website in Microsoft Edge, Firefox or Google Chrome.
2. If the extension is not installed, an installation notice for your browser appears in the bottom-right corner of the page. Use its link to open your browser's add-on store.
3. Click the button to add the extension in the store and confirm that you want to install it.
4. Return to the Datadoi tab. If necessary, refresh the page or open Datadoi in a new tab.

Installation links: [Edge](#) / [Firefox](#) / [Chrome](#)

You do not need a Datadoi user account to install the extension.

3. Using the toolbar

Datadoi toolbar in light mode.

Button	Action
:: (dots)	Drag the toolbar to another position. A single click hides or shows the other buttons; a double-click returns the toolbar to the bottom-right corner.
☾ (moon)	Turns on high-contrast mode.
☼ (sun)	Appears in high-contrast mode; restores the website's normal colors.
– / +	Decreases or increases the zoom level of the entire page.
100% (percentage)	Shows the selected zoom level; clicking the button resets zoom to 100%.
× (close)	Closes the extension toolbar in the current tab; it does not uninstall the extension.

4. Using the keyboard

Zoom range: Edge and Chrome 25–500%; Firefox 30–500%.

Use Tab to move between buttons. The buttons can be activated with Enter or Space. When the dotted drag handle has focus:

- Arrow keys move the toolbar in 10-pixel steps.
- Shift + arrow key moves the toolbar in 40-pixel steps.
- Home returns the toolbar to the bottom-right corner.
- Enter or Space hides and shows the other toolbar buttons.

The buttons have help text, selected according to the Datadoi website language when the page loads.

5. When do the notice and toolbar disappear and reappear?

What do you close?	What happens?	When does it reappear?
Installation notice ×	Hides the installation link in this tab.	The notice stays hidden when the same tab is refreshed. It reappears in a new tab if the extension is not installed.
Extension toolbar ×	Hides the toolbar in this tab, preserving the current zoom and contrast setting.	It remains hidden when the same tab is refreshed or when navigating within Datadoi. It reappears when Datadoi is opened in a new tab.
Single click on the dotted button	Hides only the other controls. The toolbar is not closed.*	Click the dotted button again to show the controls.

*The browser may retain session data when restoring a tab; temporary hiding is reset when the tab is closed.

6. What information is saved, and why?

The extension does not collect personal data or browsing history. Only the local settings and temporary state flags described below are saved.

Information	Storage location and purpose
Contrast mode	Local storage of the browser extension: “high” or “normal”. Remembers the selected color mode for future visits.
Toolbar position	Local storage of the extension: two relative screen coordinates. Restores the dragged position across different window sizes.
Closing the toolbar with ×	Datadoi tab sessionStorage: a temporary yes/no flag. Keeps the toolbar hidden during this tab session.
Closing the installation notice with ×	Datadoi tab sessionStorage: a temporary yes/no flag. Prevents the same notice from appearing repeatedly in this tab.
Returning from the store to the website	Datadoi tab sessionStorage: a temporary flag for refreshing the page; it is removed on return.
Page zoom	Zoom is managed by the browser itself. The extension does not separately save the zoom percentage in its local storage; the browser may retain zoom according to its own settings.

Information	Storage location and purpose
Interface language	The extension reads the language information of the Datadoi page (including the page's existing language setting).

These settings remain in the same browser profile. Contrast mode and toolbar position can be changed using the toolbar; removing the extension or deleting its local data resets the default settings.

7. If the toolbar does not appear

- Make sure you are using Edge, Firefox or Chrome and that the extension is enabled in your browser.
- Open the Datadoi homepage at <https://datadoi.ee/> in a new tab. If you closed the toolbar with ×, open Datadoi in a new tab.
- If the installation notice does not disappear after installation, refresh the Datadoi tab so the website can detect the extension.
